

# Multimedia and Game Art

---

## Welcome to the real world!

You will acquire the skills necessary to engage the audience and the ability to critically analyse the contemporary world, but first of all the methodological and technical skills to design interactive and multiplatform experiences, both for video games and for different sectors: from fashion to automotive, culture, medicine and much more. You will learn how to develop a design from scratch, starting with the research and conception, moving on to the realisation of the logic and dynamics of the game, the creative development of the environments, characters and all the other elements that make up the game, and finally to the technical implementation in terms of programming, modelling and three-dimensional animation.
